

General Information

Physics 174: Physics Lab Introduction

Spring 2016

Instructor: Dr. Suresh Tonwar

Office: PSC 2131 (11 am – 1 pm); E-mail; tonwar@umd.edu

TA: Regmi, Shirash

E-mail: sregmi12@umd.edu

Laboratory Schedule

Section 0301: Wed, 01:00 pm - 02:50 pm

PHYSICS 174 Course is an introductory physics lab course that meets for 1 hour and 50 minutes each week in Room 3115 of the Physics Building. In this course you will be expected to master a few basic ideas and tools which you will need for later labs. These include understanding experimental errors, computer spreadsheets for analyzing, plotting and fitting data, and working with simple electrical circuits and electrical measuring equipment. This course is intended for, but not limited to, students who are majoring in Physics or are considering doing so.

Co-Requisite: Math 140 (Calculus I). You will have to know how to take derivatives of functions starting about one month into the course. It will also be helpful to have taken a high school (or college) physics course.

Required Texts:

Only the electronic lab manual is required for this course.

Students are required to purchase the electronic lab manual from the Expert TA :

<https://www.theexpertta.com>

See below for instructions on registration for the Expert TA.

You will need the lab manual during every class, including the first class.

Other recommended texts are:

“A Practical Guide to Data Analysis for Physical Science Students” by Louis Lyons,

Cambridge University Press, ISBN: 0-521-42463-1, ISBN-13: 978-0-521-42463-9

“Introduction to Error Analysis” by John R. Taylor,

University Science Books, ISBN-13; 978-0-935702-75-0

Lab Work: This course is intended to give you hands-on experience with measurement techniques and basic data analysis. You will spend time in the lab (room 3115) each week doing an exercise that focuses on a particular concept, following specific instructions given in the Lab Manual. You'll answer a series of questions as you work through each exercise. Your professor and TA will be happy to help you whenever you will need it and to check your work. You will have a "**Checksheet**" that we will initial as we check each task that you've completed. You shall submit the checksheet to the instructor or the TA before leaving the class.

Lab Report: At the end of the lab period each week, you will turn in your work, normally in the form of an **Excel spreadsheet** that you will submit electronically using ELMS (we will tell you how to do that during the first meeting). With the current version of ELMS, you can upload and submit your assignment multiple times. You shall have an opportunity to complete any part of the calculations for a lab at home and submit a revised version to be graded. **You shall have until 11:59 pm on the day before your next week's lab session to submit a revised version. If you do not turn in a revised version, the version submitted at the end of the class will be graded. So be sure to turn in a version at the end of the class and save it somewhere to work on it at home.** Graded lab report should be available the following week.

Reading assignments are designed to help prepare you for the lab exercises, so that you can make the best use of your time in the lab. An hour and 50 minutes may seem like a lot of time, but it isn't. Preparing in advance by doing the reading assignment will help you finish on time.

Homework is typically assigned in the **Expert TA** course website. You will finish and submit your homework through Expert TA. **No credit will be given for late homework unless you are seriously ill and provide a written note from your physician.**

Exams: The course includes two in-class practical exams which will involve making measurements and analyzing the data you collect, much like the regular exercises. (In fact, the Lab Manual lists them with exercise numbers). The instructions and questions for these exams will be handed out at the beginning of the lab period on the scheduled exam dates.

Course web site: Course information, the week-by-week schedule of lab exercises, and other documents are posted in the ELMS (Blackboard) system. You will use the course web site to turn in your Excel spreadsheets from the in-class exercises, and will also be able to use it to view your grade on each assignment. You should be able to log in at <http://elms.umd.edu> and the course should appear in the "My Courses" panel.

Lab Attendance: Classes begin right on the hour. It is important that you arrive at the lab on time so that you can get instructions for the lab work and have time to finish. If you arrive more than 10 minutes late, you will probably not be allowed to do the lab at that time and will be advised to make up the missed lab during another section. However, that may not be always possible as all the sections are full, so don't be late.

Making Up Missed Labs: If you must miss your regular lab session due to any of the University approved acceptable excuses (as given in the UMD Undergraduate Catalog such as illness, a religious observance, or some other compelling reason), then you should make up the missed lab by going to the lab session of another section during the same week, as far as possible. Contact your instructor and the instructor of the other section (if different) to let them know that you need to do this and to check whether there is space available. If you cannot attend the lab of another section, contact your instructor ASAP and a time for a make-up lab will be arranged. In general, this should be done during the same calendar week as the lab is scheduled (so that the equipment for that lab is still set up). The homework for the lab will be due by 10:00 pm on the second day after you make up the lab.

A missed lab not made-up before the end of the semester will generally cost you one letter grade in your final grade.

Grading:

50%	Lab Spreadsheets
20%	Homework
15%	Test on spreadsheet, errors and measurements
15%	Test on the oscilloscope and electrical circuits

General comments on assignments: Finishing all the labs and homework sets is very important. As mentioned above, missing a lab will generally cost you one letter grade in your final grade, so be sure to come every week. Missing even one homework set will hurt your grade too, so do the best you can. Do the homework early, so that you have time to ask questions if something gives you trouble! Also, if you can't completely finish a homework set, turn in what you do have before the deadline. No credit will be given for late homework unless you have a valid excuse (illness, a religious observance, or some other compelling reason). When you are working on the homework sets, feel free to discuss among yourselves to try to figure out what is going on. However, do not use these discussions as an excuse to copy someone else's solution to the homework, or let someone else copy your solution. That is cheating and is strictly forbidden. It is also self-defeating since another part of your grade will come from tests. The right way to discuss the homework is to first work through a problem on your own and try to arrive at a definite answer, even if you aren't sure it is correct. With this preparation you can then discuss intelligently with your colleagues and see if you have missed something essential. Of course, you can always ask your instructor - that's what we get paid for!

Honor Code: The University of Maryland, College Park has a nationally recognized Code of Academic Integrity, administered by the Student Honor Council. This Code sets standards for academic integrity at Maryland for all undergraduate and graduate students. As a student you are responsible for upholding these standards for this course. It is very important for you to be aware of the consequences of cheating, fabrication, facilitation, and plagiarism. For more information on the Code of Academic Integrity or the Student Honor Council, please visit <http://www.studenthonorcouncil.umd.edu/whatis.html> .

To further exhibit your commitment to academic integrity, remember to sign the Honor Pledge on all examinations and assignments: "I pledge on my honor that I have not given or received any unauthorized assistance on this examination (assignment)".

Students with disabilities: Accommodations will be provided to enable students with disabilities to participate fully in the course. Please discuss any needs with your instructor at the beginning of the semester so that appropriate arrangements can be made.

Weather and emergency closures: If the University is closed due to weather or some emergency situation on a day when homework is due, then that homework will be due by noon on the next day when the University is open. If the University is closed on the scheduled date of an exam, then the exam will be given during your next regularly scheduled class period when the University is open. If the University is closed on your regular class day in any other (non-exam) week, including the "review" exercise week before each exam, then the exam will still be given according to the original schedule. In these or other exceptional circumstances, we will attempt to communicate with students by email. If a religious holiday falls on your lab session or exam day, let me know ASAP and we shall make suitable arrangements.

Expert TA Registration Information

1. Open <https://www.theexpertta.com/registration/>
2. Enter the class code, listed below (specific for your section 0301)

USH22MD-F4E263-1BY

3. Complete registration and payment

PHYS 174 - Section 0301 - Spring 2016 Lab Schedule

(We shall skip Exercises 3 and 13. Note the dates of the two exams on Mar 23 and May 04)

Week 1	Jan 27	No class	No class
Week 2	Feb 03	Exercise 1	Introduction to Excel
Week 3	Feb 10	Exercise 2	Measurement Error and Uncertainty
Week 4	Feb 17	Exercise 4	Straight Line Fits using χ^2 and EXCEL
Week 5	Feb 24	Exercise 5	Propagation of Errors
Week 6	Mar 02	Exercise 6	Using χ^2 to Test a Theory
Week 7	Mar 09	Exercise 7	Review of Spreadsheets and Errors
Week 8	Mar 14 - Mar 20	Spring Vacation	
Week 9	Mar 23	Exercise 8	<u>Exam on Spreadsheets and Errors</u>
Week 10	Mar 30	Exercise 9	Resistors and Multimeters
Week 11	Apr 06	Exercise 10	Current, Voltage and Ohm's Law
Week 12	Apr 13	Exercise 11	The Digital Oscilloscope and the Function Generator
Week 13	Apr 20	Exercise 12	The Oscilloscope and AC Signals
Week 14	Apr 27	Exercise 14	Review of Circuits and Error Analysis
Week 15	May 04	Exercise 15	<u>Exam on Circuits and Error analysis</u>
